Professional Summary

Full-stack developer and recent B.Tech graduate (Information Technology, 2026) with hands-on experience building and deploying production-style web applications. Completed multiple internships spanning full-stack and front-end development, shipping projects with JWT authentication, third-party API integrations, and multi-service cloud deployments across Render, Vercel, and Neon. Comfortable across the stack — React front-ends, Node.js/Express APIs, SQL and NoSQL databases — with every project taken through to a live deployment rather than left running locally.

Technical Skills

Languages: JavaScript (ES6+), HTML5, CSS3

Frontend: React.js, Vite, Tailwind CSS, Chart.js

Backend: Node.js, Express.js, REST APIs, JWT Authentication, bcrypt

Databases: MongoDB (Mongoose), MySQL, PostgreSQL

Cloud & Deployment: Render, Vercel, Neon, GitHub Pages, Docker

Tools & Integrations: Git/GitHub, Postman, Google OAuth, Cloudinary, Redis (Upstash)

Internship Experience

Full Stack Development Intern — Saiket Systems

Jun 2026 – Jul 2026

Remote

- Completed a structured sequence of six full-stack development tasks, progressing from static UI builds to production-style applications with authentication, databases, and deployment.
- Built Luxe Store, a full-stack e-commerce platform (React, Node.js, Express, MongoDB) with JWT authentication, Google OAuth, Cloudinary image uploads, and Redis caching.
- Built TaskFlow, a task management app (React, Node.js, Express), adding JWT-based authentication and later migrating its database from MySQL to PostgreSQL for production.
- Owned each task end-to-end — requirements, UI, API, database, and deployment.

Front-End Development Intern — Cognifyz IT Solutions Pvt. Ltd.

Jun 2026 – Jul 2026

Remote

- Built Castaway, a weather forecasting app integrating the OpenWeatherMap API, with dynamic UI themes tied to live weather conditions.
- Implemented interactive forecast visualizations with Chart.js and a canvas-based animated landing page.
- Delivered a fully responsive UI and shipped the app to a live GitHub Pages deployment.

Web Development Intern — InternPe

Jun 2026 – Jul 2026

Remote

- Delivered four applied front-end projects — a calculator, a static e-commerce UI, a to-do app, and a Connect Four game — in vanilla HTML, CSS, and JavaScript.
- Built Connect Four with full win-condition detection across rows, columns, and diagonals, then independently extended it with dark/light mode, canvas particle animation, and undo functionality.
- Strengthened core fundamentals: DOM manipulation, event handling, and responsive UI design.

Freelance / Independent Development

Independent Web Developer

- Design and build websites and web applications for individual and small-business clients, working solo across requirements, build, and deployment.

- Apply the same stack used in internship and personal projects — React, Node.js/Express, SQL/NoSQL — adapted to each client's needs.

Key Projects

TaskFlow — Full-Stack Task Management App

React (Vite), Node.js, Express, PostgreSQL, JWT

- Built a full-stack task management app with JWT authentication, bcrypt password hashing, and user-scoped data.
- Migrated the database layer from MySQL to PostgreSQL, rewriting all queries and adding an idempotent schema setup script.
- Deployed across three services — Render (API), Vercel (frontend), Neon (managed PostgreSQL) — and resolved production issues including CORS failures and environment configuration mismatches.

Luxe Store — Full-Stack E-Commerce Platform

React, Node.js, Express, MongoDB, Redis, Docker

- Built a full-stack e-commerce app with product catalog, cart, and order management, plus JWT authentication and Google OAuth login.
- Integrated Cloudinary for image uploads, Redis (via Upstash) for caching, and automated PDF invoice generation.
- Containerized the app with Docker, set up a CI/CD pipeline, and deployed to production.

Castaway — Weather Forecast App

JavaScript, OpenWeatherMap API, Chart.js

- Built a weather app with real-time forecasts via the OpenWeatherMap API and interactive Chart.js graphs.
- Designed dynamic UI themes that shift based on live weather conditions, plus a canvas-based animated landing page.
- Implemented an authentication flow and deployed to GitHub Pages.

Connect Four — Two-Player Browser Game

JavaScript, HTML5 Canvas, CSS

- Built a two-player Connect Four game with full win-detection logic across rows, columns, and diagonals, plus an undo feature.
- Added glassmorphism styling, dark/light mode, and canvas-based particle animations.

Aurora — Trivia Quiz Game

JavaScript, HTML5, CSS3

- Built a browser-based trivia game with speed-based scoring, streak tracking, and persistent high scores via local storage.
- Designed a glassmorphic UI with animated backgrounds and a confirmation modal for navigation.

Personal Portfolio

HTML, CSS, JavaScript

- Designed and built a personal portfolio site with a systems-console aesthetic, scroll-reveal animations, and a live clock.
- Integrated a Formspree contact form and deployed via GitHub Pages.

Education

Bachelor of Technology (B.Tech), Information Technology

2022 – 2026

DY Patil School of Engineering and Technology, Pune

CGPA: 7.70 / 10 — First Class

Certifications

- Full Stack Web Development – Virtual Internship, AICTE (National Internship Portal) / EduSkills Academy — 10 weeks, Apr–Jun 2025
